Timber values are based on results of the 2007 Timber Products Output (TPO) Survey. "Acres of Forestland" and "Percent Forest" fields are based on 2007 estimates from the Forest Inventory and Analysis (FIA) program. Both programs are jointly administered by the USDA Forest Service - Southern Research Station and the SC Forestry Commission. TPO and FIA numbers are designed to be interpreted at the state level. Assistance in development of data provided by Richard A. Harper, Forest Resource Analyst, USDA Forest Service - Southern Research Station.

Primary Wood-Using Mills by Region, 2007

SOUTH CAROLINA FAST FACTS

- South Carolina's forest product mills remained stable in 2007 at 75 mills. Although four sawmills closed, the State gained three new shavings mills and one composite panel mill.
- Pulpwood is our leading forest product by volume, but sawtimber is South Carolina's most valuable forest product (\$379 million for sawtimber vs. \$283 million for pulpwood).
- Roundwood harvested from South Carolina's forests for composite panels increased 66 percent. However, the production of forest products from roundwood declined 5 percent overall (4 percent decline for softwoods and 11 percent decline for hardwoods).
- South Carolina exports over \$1 billion in forest products annually.
- Timber volumes and growth are at record levels, and continue to increase, offering significant opportunities for expanded mill production.

Production of Primary Timber Products in South Carolina
